Open problems remain: developing methods for constructing deployment-proxy data beyond shallow resampling, quantifying the priming effect of directly asking about evaluation-ness, and measuring unprompted evaluation awareness to determine whether models act on their recognition without being asked.

Acknowledgments and Disclosure of Funding

This research was funded and conducted as part of the LASR Winter Cohort 2026 program. We thank Erin Robertson, Brandon Higgs and Tamkeen Nawab for their support in project management. We thank them for ensuring we stepped back, rethought, and focused on the right questions and for their reviews throughout. We also thank Nitisha Jain for her contributions during the early stages of this project.
